A four (4) month seasonal bulk consumer will be a bulk consumer whose actual kVA and/or kWh consumed for four (4) months or less in a financial year was in the sole discretion of the Executive Manager: Infrastructural Services substantially above the average kVA and/or kWh consumption of the remaining eight (8) months of the financial year.					
Seasonal ***					
A six (6) month seasonal bulk consumer will be a bulk consumer whose actual kVA and/or kWh consumed for six (6) months or less in a financial year was in the sole discretion of the Executive Director: Infrastructure Services substantially above the average kVA and/or kWh consumption of the remaining six (6) months of the financial year.					
Seasonal * to ***					
A bulk consumer will have to submit an application to the Executive Manager: Engineering Services to be classified as a 2, 4, or 6 month seasonal bulk consumer.					
Bulk TOU tariff is only available for small and large bulk consumers with a load factor of 45% and above.					
Note: " Large power users who lower their Notified Maximum Demand (NMD), to save on these charges, will be allowed to do so subject to the following:					
(a)	Only one lowering NMD allowed per financial year.				
(b)	The capacity that is given up will not be reserved for the customer only, but utilized by the municipality as and when required.				
(c)	When the customer wants to take up that capacity sometime in the future, he/she will be required to pay the Developers Contribution if network upgrading is required at the time MINUS the Development Contribution at the time when the capacity was given up.				
(d)	The abovementioned arrangement (c) will be valid for a period of three years. After this period, customers will have to pay the full Developers contribution for any increase of his/her NMD.				
(e)	Customers who wishes to extend the arrangement will be required to make special application to the Senior Manager: Electro Technical Services for extension of such period."				
(f)	The consumer or owner will be responsible to bear all related costs, should there be such request in a form of an application to change or downgrade his supply where network changes or upgrades are involve.

Supply Rules:					
Bulk consumers can take supply at 400V or at 11kV.					
Council reserves the right to connect consumers with an estimated demand exceeding 50kVA as Bulk Consumers.					
Consumers with expected demand exceeding 100kVA, but does not exceed 500kVA, can only be supplied at 400V with special permission of the Deputy Executive Manager Senior Manager: Electro Technical Service, whose decision will be based on the capacity of the 400V network.					
Where the expected maximum demand of a consumer exceeds 500kVA, supply shall only be at 11kV.					
However, measurement can be done on Low Tension where possible.					
Maximum demand charge is only applicable during the Peak and Standard hours whereas Access charge is applicable to all periods.					
Access charge is based on the highest of the notified demand or the highest maximum demand during previous 12 months unless adjusted as per rules above.					
The consumer or owner will be responsible to bear all related costs, should there be such request in a form of an application to change or downgrade his supply where network changes or upgrades are involve

Notes				
(a)	With respect to the rezoning and network designs of domestic properties a maximum of two single phase meters per erf is allowed.			
(b)	If the load requirement exceeds the network design, or with respect of subdivided erven or new developments, network recovery cost will be used to upgrade the network to accommodate the new load requirements.			
(c)	The Manager: Planning and Customer Services must give his approval in a case of such type of installation.			
(d)	Current limiter (tariff) of pre-paid meters are only allowed to a maximum of 60A. Any request beyond 60A may be considered by the Manager: Planning and Customer Services which is subjective according to the system design, kWh consumption and consumer application.			
2.9.4	Non-Payers (Excluding Municipal Property)			
2.9.4.1	Same as in 12.2 2.9.2.7 and 12.3 2.9.3.3 above, except that a new agreement must be entered into which stipulates that a pre-paid meter is a pre-condition.	Free	Free	
2.9.5	NRS 069 NETWORK RECOVERY COST			
2.9.5.1	A once-off network contribution for the electricity requested for subdivisions, new developers, consent users, scheme amendments or consumer upgrades (existing serviced erven where requested capacity is greater than the original designed or installed capacity). The after-diversified maximum demand (ADMD) for each erven is used in network designs for township development, scheme amendment and service connection upgrades.			
2.9.5.1.1	The ADMD has been determined by STATS SA Census 2011 municipal report which may be use for the following types of residential installations:			
(a)	Residential low income (flats or units) - 3kVA			
(b)	Residential medium or high income (flats or units) - 5kVA			
(c)	Single residential low income (per erf) - 3kVA			
(d)	Single residential medium or high income where the erf size is smaller than 500m ² - 7kVA			
(e)	Single residential medium or high income where the erf size is greater than 500m ² - 9kVA			
2.9.5.1.2	For very high residential three-phase connections or upgrade of existing single phase connection to three phase maybe assume that the ADMD for a three-phase connection is three (3) times that of a single phase connection.			
2.9.5.1.3	The after-diversified maximum demand (ADMD) or notified maximum demand (NMD) per erf for commercial and all non residential applications requested in writing by the owner or developer shall be calculated prior to the NMD as indicated on the application by the owner or developer with the approval from the Manager: Planning and Customer Services Electro-Technical Engineer (Planning, Construction and Design) . The NMD's of existing serviced erven are equal to the installed capacity or as per service agreement.			
2.9.5.1.4	Determining charges			
(a)	The NRS069 network recovery cost is determined by the actual level at which the development connects to the supply system. The charge is calculated as follows:			
(i)	R = (ADMD1 - ADMD2) x NRC, where			
(ii)	R = Total network recovery cost payable in rand value			
(iii)	ADMD1 = Sum of new ADMD in kVA			
(iv)	ADMD2 = Sum of existing ADMD in KVA			
(v)	NRC = Network recovery cost per level as indicated below			
2.9.5.1.5	Network contributions			
(a)	The "network recovery cost" charges must be as such to cover the capital liabilities incurred or to be incurred by the municipality in supplying the distribution and or increase the capacity to the premises or group of premises. The said network recovery cost excludes the linkage portion of the connection and or upgrade to the linkage as determined by the Manager: Planning and Customer Services. Such cost for the upgrade and or linkage shall be estimated at the cost of the developer or owner. The contributions per kVA at the different connection levels are as follows:			
(i)	Paarl: Description - Cumulative contribution per kVA			
(aa)	66/11kV Trf	3,538.86	3,179.00	11.32%
(bb)	11kV Network	6,259.52	5,623.00	11.32%

	Where Charge			
C =	Industrial Effluent Charge for the Cycle in Rand			
V _t =	Total Volume of Industrial Effluent discharged from the premises during the cycle concerned in Kilolitres. Where effluent meter is installed this is a direct measurement. A percentage (based on the agreed water balance) of water usage is used in the absence of an effluent meter.			
R =	Unit conveyance charge for Industrial Effluent, in cent per Kilolitre. (Total Operating budget ÷ Total Inflow). Reticulation(Conveyance): Sewerage Administration Operational Buget + Sewerage Operational Budget			
T =	Unit Treatment charge for Industrial Effluent, in cent per kilogram COD (Total Effluent Treatment Operating Budget ÷ Total Organic Load).			
COD _t =	Chemical Oxygen Demand of such Industrial Effluent in milligram per litre(Average for the cycle)			
Notes				
In the absence of an Industrial Effluent permit, 80% of the total incoming water meter reading will be regarded as the Industrial effluent volume.
