Supply Rules:				
Bulk consumers can take supply at 400V or at 11kV.				
Council reserves the right to connect consumers with an estimated demand exceeding 50kVA as Bulk Consumers.				
Consumers with expected demand exceeding 100kVA, but does not exceed 500kVA, can only be supplied at 400V with special permission of the Senior Manager: Electro Technical Service, whose decision will be based on the capacity of the 400V network.				
Where the expected maximum demand of a consumer exceeds 500kVA, supply shall only be at 11kV.				
However, measurement can be done on Low Tension where possible.				
Maximum demand charge is only applicable during the Peak and Standard hours whereas Access charge is applicable to all periods.				
Access charge is based on the highest of the notified demand or the highest maximum demand during previous 12 months unless adjusted as per rules above.				
The consumer or owner will be responsible to bear all related costs, should there be such request in a form of an application to change or downgrade his supply where network changes or upgrades are involve.

2.9.5	NRS 069 NETWORK RECOVERY COST		
2.9.5.1	A once-off network contribution for the electricity requested for subdivisions, new developers, consent users, scheme amendments or consumer upgrades (existing serviced erven where requested capacity is greater than the original designed or installed capacity). The after-diversified maximum demand (ADMD) for each erf is used in network designs for township development, scheme amendment and service connection upgrades.		
2.9.5.1.1	The ADMD has been determined by STATS SA Census 2011 municipal report which may be use for the following types of residential installations:		
(a)	Residential low income (flats or units) - 3kVA		
(b)	Residential medium or high income (flats or units) - 5kVA		
(c)	Single residential low income (per erf) - 3kVA		
(d)	Single residential medium or high income where the erf size is smaller than 500m ² - 7kVA		
(e)	Single residential medium or high income where the erf size is greater than 500m ² - 9kVA		
2.9.5.1.2	For very high residential three-phase connections or upgrade of existing single phase connection to three phase maybe assume that the ADMD for a three-phase connection is three (3) times that of a single phase connection.		
2.9.5.1.3	The after-diversified maximum demand (ADMD) or notified maximum demand (NMD) per erf for commercial and all non residential applications requested in writing by the owner or developer shall be calculated prior to the NMD as indicated on the application by the owner or developer with the approval from the Manager: Planning and Customer Services. The NMD's of existing serviced erven are equal to the installed capacity or as per service agreement.		
2.9.5.1.4	Determining charges		
(a)	The NRS069 network recovery cost is determined by the actual level at which the development connects to the supply system. The charge is calculated as follows:		
(i)	R = (ADMD1 - ADMD2) x NRC, where		
(ii)	R = Total network recovery cost payable in rand value		
(iii)	ADMD1 = Sum of new ADMD in kVA		
(iv)	ADMD2 = Sum of existing ADMD in KVA		
(v)	NRC = Network recovery cost per level as indicated below		
2.9.5.1.5	Network contributions		
(a)	The "network recovery cost" charges must be as such to cover the capital liabilities incurred or to be incurred by the municipality in supplying the distribution and or increase the capacity to the premises or group of premises. The said network recovery cost excludes the linkage portion of the connection and or upgrade to the linkage as determined by the Manager: Planning and Customer Services. Such cost for the upgrade and or linkage shall be estimated at the cost of the developer or owner. The contributions per kVA at the different connection levels are as follows:		
(i)	Paarl: Description - Cumulative contribution per kVA
