CERTIFICATE OF INDEPENDENT BID DETERMINATION

1. This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
2. Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
3. Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
4. This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
5. In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:-

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

PART B: TECHNICAL SPECIFICATIONS AND PRICING SCHEDULE

TECHNICAL SPECIFICATIONS

The following minimum technical specifications are applicable and must be complied with:

TRAFFIC LIGHT SPECIFICATIONS

The construction of the traffic light must comply with SANS 1459:2015 and is of modular design. The aspect housings must be fixed together by means of stainless-steel screws and rigid, powder-coated aluminium joiner plates. Each detachable aspect housing must be dust proof, watertight and the traffic light must be of a composite design utilising the following materials:

- UV stabilised nylon with a 30 % glass fill for rigidity.
- High-silicone aluminium where mechanical strength is required.
- Grade 304 stainless steel for clips, catches and screws.

The traffic light must be weatherproof and the LED compartment easily accessible for maintenance by means of two quick-release catches. The LED module, fixed within the reinforced nylon bezel forms a rigid compartment door to ensure the aspect remains waterproof over extended periods. Aluminium mounting bosses on both the top and bottom of the traffic light must be provided for fixing to the pole. The traffic light must not corrode, crack or distort after prolonged exposure to the harsh outdoor conditions experienced in Southern Africa.

All housing dimensions are as per the attached drawings. See Figures 2 and 3. Please note the important detail portrayed by Figure 1.

LED MODULE

The LED module must be of a “single source” design, not a matrix design (i.e. discreet LED dots are not visible to the motorist). All internal circuitry must be protected from dust, moisture and physical damage by a secondary housing manufactured from glass filled nylon (IP65 rated and tested by the SABS). The module must have a specially designed outer diffuser lens which minimises dust collection on the lens surface. The LED module must have a pluggable electrical connection (MOLEX MiniFit™).

LED OPTICS

LED modules must comply with SANS 1459:2015 (and SANS 1459:2004) – LED Traffic Lights and must be tested by the SABS. The optical design utilises high power LEDs, a collimator lens and front diffuser lens to give a smooth, large diameter signal. The diffuser lens must be manufactured from high impact, UV stabilised polycarbonate. All lenses that are used in the optical system must be clear, thus negating the sun-phantom effect.

POWER SUPPLY

The LED power supply must be of a switch mode design, fused and protected from line surges. The LED signal operates from a 50 Hz, AC supply at the following input voltage ranges:

130 V_{AC} to 170 V_{AC} - Dimmed mode

184 V_{AC} to 276 V_{AC} - Normal light intensity

Any fluctuation of the input voltage within the above ranges must have ***no effect on the luminous intensity*** of the signal. When driven at an input voltage less than 120 V_{AC}, the power supply ensures that the signal is completely off. The power supply must also ensure that the switch-on and switch off times of the signal do not exceed 75 ms. The LED module must have a power factor of 0.98 and the power consumption does not exceed 7 W.

All LED modules must include an active load as part of the power supply. The purpose of this active load is to clamp unwanted residual voltage on cable cores. The active load does not consume power or dissipate heat when the LED module is switched on.

MARKING AND DESIGN LIFE

Each LED module must have legibly and durably marked with the following information:

- The manufacturer's name and product model.
- The maximum power consumption.
- The input voltage range.
- A serial number.
- The date of manufacture.

The complete LED module must be guaranteed for a period of five years, physical and extreme lightning damage excluded.

RUBBER GASKETS

The hinged door seals against a 6 mm Neoprene rubber gasket and is held tightly closed by two over-centre, stainless steel catches. A 3.5 mm Neoprene rubber gasket must provide a weather-tight seal between the LED module and the housing.

VISORS

A black pigmented, UV stabilised, polyethylene visor projecting 200 mm from the signal face is fitted to each aspect using stainless steel screws. The visor must not obscure the lense.

CABLE ENTRY AND WIRING

Cable entry is at the bottom of the upper aspect's housing, cables are protected by a heavy-duty, reinforced PVC hose. The hose diameter is 19 mm and length is as follows:

- 1 and 2 aspect traffic lights: 1200 mm
- 3 and 4 aspect traffic lights: 600 mm (Standard)

The wire protrudes at least 200 mm from the PVC hose and colour coding is as follows:

- Red Signal – Red wire
- Amber Signal – White wire
- Green Signal – Blue wire
- Additional Signal – Grey wire
- Neutral – Black wire

EXTERNAL FINISH

The traffic light must be pigmented matt black and all aluminium parts are powder coated black.

MOUNTING

Each traffic light housing must have an aluminium threaded boss at the top and bottom of the assembly to facilitate mounting. Two 10 mm set screws and washers are provided with each traffic light assembly. A stud with nut leaving thread exposed to the outdoor elements is not acceptable.

Brackets to mount traffic lights side by side are available as an optional extra.

CONFIGURATIONS

The following traffic light configurations are available:

- 1 aspect
- 2 aspect – S10, S11P (pedestrian), S11C (cyclist), S12, S10B (Bus)
- 3 aspect – S1, S2, S3, S4 and S1B
- 4 aspect – S5, S6 and S7
- 5 aspect – S8, S9, S8B (Bus) and S9B (Bus)

All the above configurations must be available for left, right and straight traffic movements.

STATUTORY APPROVAL

The traffic lights must be successfully tested by the South African Bureau of Standards (SABS) for compliance with SANS 1459:2015 (for LED traffic lights). The LED module has also been tested for IP65 compliance. Documentary proof of compliance to both tests has been submitted.

BACKGROUND SCREENS

CONSTRUCTION

The background screens are 500 mm wide with a full radius on the top and bottom. Dimensions of the background screens comply with Volume 4, Part 3 of the South African Road Signs Manual and the technical requirements of SANS 1459:2015.

Background screens must be of a modular construction to facilitate maintenance but are supplied as a fully assembled unit for ease of installation. The unit fits directly onto the traffic light without the use of brackets, straps or clamps. Background screens are shaped in such a manner that maximum strength is achieved with a lightweight construction. The screens are fitted to the lights with a sufficient number of screws to spread the windage load, thus preventing breaking of the screens over extended periods. Screens are supplied complete with stainless steel mounting screws.

Background screens are also available in a rectangular shape.

No daylight is visible between the lantern and the background screen.

MATERIAL

Background screens must be manufactured from a, UV stabilised, reinforced polymer compound.

FINISH AND BORDER

Background screens are machine moulded and pigmented black. All background screens are supplied with a 50mm wide, glossy white border.

CONFIGURATIONS

The following standard background screen configurations shall be available:

- 1 aspect
- 2 aspect – S10 and S12
- 3 aspect – S1, S2, S3 and S4
- 4 aspect – S5, S6 and S7
- 5 aspect – S8 and S9

SIDE MOUNTING BRACKETS

All 5 aspect background screens must be supplied with a hot-dip galvanised side-mounting bracket.
